Where Innovation and Quality Meet

Take Control of your EN waste and Terminate it!

Introducing EN Terminator from LeKem Of Indiana, INC.

- Depending on your volume and waste costs the EN Terminator can save your company thousands by reducing the nickel content to less than 5 ppm in a working bath.
- Easy to use and environmentally friendly will meet or exceed RoHs and ELV requirements.
- Can be used with any EN product on the market.
- Roughly 10 gallons of the EN Terminator will be all you need for a 150 gallon tank.
- You can use existing EN tanks but a Stainless Steel dedicated tank is optimum. The dedicated tank does not need plumbing, filtration or agitation, it just needs a heater. This will free up your EN tanks and reduce the wear and tear on your Nitric Acid.

Please contact LeKem, Inc. for more info on the EN Terminator and start saving money and taking control of your EN waste today!

LeKem also offers a full line of the most up-to-date EN products and equipment. We typically save our customers up to 30% with our EN chemistries and equipment designs.
