

Meet the LeKem difference

Upon request from a LeKem representative, or by visiting our website www.lekem.com, you can observe our full line of Electroless Nickel products, complete Power Point Presentations and letters of reference from our satisfied customers.

A word from our President Paul Feagins

"I give you my personal guarantee that we can save you money and time with our products and equipment. We will be with you every step of the way and will continue to help you find ways to grow and be as efficient as possible."

We can build it, formulate it and ship it to anywhere you need. Let's plate the world!

Innovation

“Evolution is not a force, but a process”. That’s the philosophy that has made LeKem a leader in the metal finishing field. Clear vision of the future is necessary to continue the advance of the world’s producing industries. Through continuous innovations in manufacturing and the highest standards in process control, Lekem has spent a quarter of a century developing and refining formulas to maximize performance. At LeKem, this timely process has helped evolve a superior product. It’s very simple an efficient process increases profitability for us, as well as our customers.

Located in Batesville, Indiana, LeKem is a major supplier to the Electroless Nickel industry. We manufacture only the highest

quality Electroless Nickel and Nickel Sulfate liquid. We have perfected the manufacturing process of nickel products by starting with the purest nickel metal powders. Through proprietary manufacturing processes and sub-micron filtration of all our finished products, we eliminate the impurities that are found in our competitors’ products. Service and reliability, that’s the LeKem difference.

We as well as our customers are proud of our chemical surface products and the quality they represent. The LeKem process provides a variety of choices in premium Electroless Nickel technology. Not all applications are the same, from decorative to functional finishes, LeKem has the technology that will fit your application. Our plating customers rely on our bath as well as our technical assistance. We focus on bringing our customers up-to-date in technology and performance of their products and equipment. Once assessed LeKem brings significant cost savings, along with a knowledgeable service staff and a 24-hour help line.

Quality

To complement our Electroless Nickel product, LeKem can build and design your whole EN process line. It is our belief that you should make the EN tanks fit your chemistry not your chemistry to fit your tanks. LeKem’s Electroless Nickel equipment has cutting-edge technology that will make your plating line more efficient. This is achieved through unique bottom plumbing design and quick disconnect transfer systems which allow for continuous filtration of the bath. LeKem’s plating systems can cut down on your plating time, the amount of waste generated and increase your bath life. Our design keeps nitric acid out of your plating bath.

Lekem is dedicated to manufacturing the highest quality Electroless Nickel solutions. We are the only manufacturer who reacts pure nickel metal powders to produce Nickel Sulfate. You will see an improved nickel finish, consistent plating rates from your bath and an increase in metal turnovers (8-12) giving you less downtime. We constantly monitor our suppliers to insure they meet our high standards. We are certain that our quality is second to none.

Our strict quality control procedures test all products before they leave the production area. We test for chemical concentrations, plating rate of the bath and deposit finish. All these tests have to be made and approved before any product receives a quality control lot number. Our products can be documented back to our chemical suppliers allowing us to insure that the product you receive will always be consistent.
